Your Flyer Factory

A private tool on your website that turns a short brief into a print-ready flyer, social posts and an invoice. No account. Nothing to install.

FOR YOU

cultureshyftmedia.com/factory/

Pick a sample, fill the brief, watch the live preview. Save a PDF, download social images, make an invoice.

FOR YOUR CLIENTS

cultureshyftmedia.com/order/

A client fills in what they want. Their email app opens with the request ready to send to mark@cultureshyftmedia.com.

Set it up once (10 minutes). Do this before you take money.

1. **Use your main device.** Open the factory on the phone or computer you use most. Everything saves in that browser only.
2. **Add your payment details.** Tap **Make invoice**, then **Payment settings** (top of the invoice screen). Enter your Cash App $cashtag, your Zelle email or phone, and your PayPal.me link. Save. Until you do, invoices show the fake placeholders **$YourCashtag**, **you@example.com** and **paypal.me/YourName**.
3. **Test your email.** Open the order page, fill it in with your own email, tap **Send to Mark**, and press Send. Then check that mark@cultureshyftmedia.com really received it.
4. **Make one practice flyer and invoice.** Check the payment lines on the invoice are right before a client sees one.
5. **Prices and samples are built in:** $20 per flyer, $5 extras, $10 print prep, $15 rush. You cannot edit them on the page. To change them, ask Uncle Matt.

Making a flyer in 5 steps

1. Open **/factory/** and pick a sample under **Start with a sample**.
2. Replace the made-up details with the real headline, date, place and contact.
3. Add a photo if you have one. Check the live preview.
4. Tap **Save to My flyers**, then **Save as PDF** (US Letter) or download the Instagram square, story or Facebook cover as a PNG.
5. Tap **Make invoice**, check the amounts, and send it. The invoice asks for a 50% deposit and 50% on delivery.

Good to know

- **Saved in this browser.** Drafts and payment settings stay on this device. A new phone, a new computer or cleared browser data starts empty.
- **Back up flyers** with **Export brief**. Restore with **Import brief**. Payment settings are not exported, so keep them written down.
- **Unlisted.** Not linked from the homepage and hidden from search engines. Only people with the link find it.
- **No server storage.** Nothing a client types is stored on a server.

What it does not do: it does not take card payments, confirm that you were paid, or keep customer accounts. You check Cash App, Zelle or PayPal yourself before you call an invoice paid.
